

PERSONAL FINANCE TRACKER

Project Documentation

Intern Details

Field	Details
Candidate Name	Kummetha Mounika
Selected For	Frontend Web Development
Organization	Codtech IT Solutions Private Limited
Duration	6 Weeks
Internship Period	06 June 2026 – 18 July 2026
Intern ID	CITS2257
Technologies Used	HTML5, CSS3, JavaScript

1. Abstract

The **Personal Finance Tracker** is a frontend web application designed to help users manage their daily financial activities. The application enables users to add income and expense records, automatically calculate the available balance, and maintain a complete transaction history.

The application provides separate pages for **Dashboard, Income, Expense, Balance, and Transactions**. It also displays financial advice and financial status to help users better understand their financial condition. All transaction data is stored in the browser using **Local Storage**.

2. Introduction

Personal financial management is important for tracking earnings and spending. Maintaining these records manually is difficult and time-consuming. The **Personal Finance Tracker** provides a simple digital solution for recording financial transactions and monitoring the available balance.

The project is developed using **HTML, CSS, and JavaScript** with a responsive user interface. It stores transaction records locally in the browser and does not require any database or internet connection.

3. Objectives

- Maintain income records.
- Maintain expense records.
- Calculate the available balance automatically.
- Display complete transaction history.
- Provide financial advice for better money management.
- Develop a responsive frontend web application.

4. Technologies Used

- HTML5
- CSS3
- JavaScript

5. Software Requirements

- Operating System: Windows
- Text Editor: Notepad
- Web Browser: Google Chrome

6. Hardware Requirements

- Computer or Laptop
- Minimum 2 GB RAM
- Keyboard and Mouse

7. Project Modules

7.1 Dashboard

The Dashboard displays **Total Income, Total Expense, Available Balance, and Recent Transactions**. It serves as the home page of the application and provides quick navigation to all modules.

Functions

- Displays financial summary.
 - Shows recent transactions.
 - Provides navigation to all pages.
-

7.2 Income Module

The Income page allows users to enter the income source and amount. The entered information is stored locally and automatically updates the dashboard.

Functions

- Add income details.
 - Store income records.
 - Automatically update the dashboard.
-

7.3 Expense Module

The Expense page allows users to enter the expense name, amount, and category. The recorded expense is stored locally and reflected in the financial summary.

Functions

- Add expense details.
 - Categorize expenses.
 - Update financial summary.
-

7.4 Balance Module

The Balance page calculates the current balance by subtracting total expenses from total income. It also displays financial advice and a financial status message based on the user's balance.

Functions

- Calculate available balance.
- Display financial status.
- Provide financial advice.

7.5 Transactions Module

The Transactions page displays all recorded transactions with their title, amount, type, and date. It also provides a **Delete All Data** button to remove all stored transaction records.

Functions

- Display transaction history.
 - Show transaction details.
 - Delete all stored records.
-

8. Working Process

1. Open the application by running **index.html**.
 2. Navigate to the **Income** page and enter income details.
 3. Navigate to the **Expense** page and enter expense details.
 4. The transaction details are stored in the browser using Local Storage.
 5. The Dashboard automatically updates the Total Income, Total Expense, and Available Balance.
 6. The Balance page displays the current financial status.
 7. The Transactions page shows all transaction records and allows users to delete all stored data.
-

9. Features

- Dashboard Summary
- Income Management
- Expense Management
- Automatic Balance Calculation
- Transaction History
- Delete All Data
- Financial Advice
- Financial Status Display

- Responsive Design
 - Modern User Interface
-

10. Advantages

- Simple and easy to use.
 - Responsive interface.
 - Automatic financial calculations.
 - Fast performance.
 - No database required.
 - Stores data locally in the browser.
 - Easy navigation between pages.
-

11. Limitations

- No user login system.
 - Data is available only in the same browser.
 - No online backup.
 - No graphical reports.
 - No export option.
-

12. Future Enhancements

- User Login System
 - Monthly Reports
 - Expense Charts
 - Budget Planning
 - PDF Report Export
 - Cloud Storage
 - Dark Mode
-

13. Conclusion

The **Personal Finance Tracker** is a responsive frontend web application that provides an easy way to record income and expenses, calculate the available balance, and maintain transaction history.

The project demonstrates the practical implementation of **HTML5, CSS3, and JavaScript** while helping users organize their financial information efficiently. It provides a clean interface, automatic calculations, and browser-based storage, making it suitable for everyday personal finance management.
